BRIEF ON BRC ARABIA (LLC)

BRC ARABIA (LLC) was originally established in SAIF ZONE, Sharjah in December, 1996, under the name of **BRC ALFADL REINFORCING LTD**. In 2005, the name changed to **BRC ARABIA (FZC)**. In December, 2009, **BRC ARABIA (LLC)** was established in Dubai Industrial Park, previously named as Dubai Industrial City (DIC), where it started its full operation in November, 2011 with a Branch Office in Abu Dhabi.

Since July, 1997 BRC ARABIA has been continuously supplying the UAE Market and the Gulf States Market with quality products. The drive behind relocation of its operation to DIP-Dubai was to expand its operations and to better serve customers from these Markets.

The Management and Production Team have long experience in the Industry of Steel Reinforcement Fabrication of Cut & Bent, Welded Wire Mesh, Cold Drawn Wires and Steel Rebars Threading. Most of the team joined BRC from inception as they were recruited from the Partners Companies who had been operating similar industries for decades.

From 1997, BRC Arabia has been contributing to the development of Reinforcing Steel fabrication in UAE. It had supplied its products to many major projects including: <u>Infrastructure</u>, <u>Power Plants</u>, <u>Dubai Metro</u>, <u>Industrial and Oil Complexes</u>, <u>Commercial and Residential Towers and Housing Projects</u>.

The New Plant at Dubai Industrial Park is a World Class facility of about 11,000 M² built-up areas on a 30,000 M² Plot. It is equipped with the best equipment brands capable of producing top quality products. **BRC** Arabia operates under the Quality Management System ISO 9001:2000 – since August, 2001. BRC Quality Management System was upgraded to ISO 9001:2008 from October, 2010 and now, certified to the new version, ISO 9001:2015. **BRC ARABIA** is the first UAE Wire Mesh Manufacturer to obtain DCL Certification.

To meet the highest quality standard of the products, **BRC ARABIA** purchases its steel rebars and wire rods, mainly from well-known Regional Mills and occasionally from International Mills.

METHOD STATEMENT – BRC WELDED WIRE MESH PRODUCTION

DESCRIPTION

BRC Welded Wire Mesh is another form of concrete reinforcement produced MAT Sheet of Welded Steel Bars spaced at equal and exact distances, called opening. These openings can range from 50 to 400mm, centre to centre of wires. They come in standard sheet sizes (usually 2.40 x 4.80m) or in other dimensions, depending on the standard of production used i.e. BS, DN or ASTM. Bigger or Smaller Mesh can be produced with special wires arrangement and are called Special or Engineering Mesh. They are usually supplied in bundles of pre-counted sheets, depending on the steel bars diameters and sheet weight. BRC Welded Wire Mesh, save substantial time and cost in fixing steel, with accurate spacing and distribution.

USAGE

BRC Welded Wire Mesh is generally used for reinforced concrete slab. They can also be used in other concrete structure members, like walls or strap/isolated footings. They can be bended to fit the required shape or structure. Mesh can also be used for Industrial purposes as a partition, shelves or safety fencing.

RAW MATERIALS

The Steel Bars / Wires used in the production are called Wires Rods. They are produced by steel Mills in form of continuous Coils of weight ranging from 900 to 3500 kg each. They are produced according to Standard, mainly AISI / SAE Standard. Their Chemical Composition varies according to required quality and strength.

The variation is mainly, in the carbon content. Usually Wire Rods are low carbon content steel (carbon content ranging from 0.06 to 0.18%). For Wire Mesh Production, the carbon content is generally between 0.08 to 0.14%. So the Tensile and Yield Strength are relatively low when compared to Hot Rolled Deformed Steel Reinforcing Bars. But these low Yield / Tensile steel is Cold Rolled into High Tensile steel during the rolling process.

MANUFACTURING PROCESS

The Manufacturing Process of BRC Welded Wire Mesh is achieved by two or three stages, depending on Welding Lines used. The first stage is Cold Rolling of the steel wires in Coils / Spool the second is the Straightening and cutting of the wires (this stage can be omitted if using Welding Lines which can be fed from coils/spools). The last stage is the Welding Process of Steel Wires/Bars, to form the Mesh Sheet.

COLD ROLLING PROCESS

To Transform the low carbon, low strength, Wire Rod into a High Strength Deformed Wires, the Wire Rod are decoiled and passed thru a Cold Rolling Line, where they submit to Mechanical Pressure by Rolling Wheels (special alloy/tungsten coated steel rollers) reducing its diameter by one or two millimeters. This Rolling and pressure re-arrange the molecules structure of the steels bonding it harder. With this process both Yield and Tensile Strength of the rolled wires increase substantially. Then the wires go thru a second set of deforming wheels which create three lines of diagonal ribs (the Geometry, Height & Length of Ribs, as per the standard applied). Also with the ribs deformation, BRC Cold Rolled Wires are printed with "BRC" Mark, as a guarantee of quality. This mark appears on all BRC Mesh Steel Bars at a spacing of 40cm.

The Rolled Deformed Wires are collected on spools, marked with a tag carrying all information (i.e. job number, standard & diameter) a sample from each spools (of two tons or less) is cut for testing to verify, the strength, shape and diameter tolerance.

Then, the Cold Rolled Wires are fed to the welding lines directly from spools or after straightening and cutting to the required bar length.

STRAIGTHENING & CUTTING PROCESS

For Mesh Welding Lines, using pre-cut wires, the Cold Rolled Wires are straightened and cut, by Straightening & Cutting Machines to the desired length i.e. for mesh of 2.40 x 4.80m, the bars are cut straight to these lengths, and fed to the mesh welding line.

WELDING PROCESS

The Cold Rolled Wire are fed to the welding machines from two sides. The longitudinal wires (long wires) are fed longitudinally thru the machine, while the transversal wires (short wires) are fed transversely from the side or top of the machine. Both wires touch each other at right angle and go thru the welding copper dies. These dies are pre-set and fixed as per the spacing of the mesh required, on the top and bottom of the welding beam.

The welding process is called: Fusion Welding. Where the wires are fused together, by a high intensity electrical current (ranging from 400 to 1200 amp) thru the dies and with a simultaneous mechanical pressure by the welding beam. This creates a mechanical bond of wires. No welding rods or welding materials are used for mesh welding. After each weld stage (where all long wires are weld with one of the short wires), the sheet is advanced thru the welding line with continuous wires welding until the sheet of mesh is produced completely. The mesh produced is collected by a turning and stacking device and packed into bundles of mesh sheets. A tag with all technical and mesh type information is tied to each bundle.

TESTING

An in-house testing is carried out in BRC Lab on Cold Rolled Wires. After rolling, where samples are tested for physical characteristics and diameter verifications. Also tests are performed on welded mesh to verify its tensile strength and welding strength.

The testing machine is electronically operated and connected to a computer/printer device which record store data and produce Test Certificate.

All Cold Rolled Wires, produced by BRC, are tested and their records are stored in various media (all in soft copies) Tests Reports are printed as and when required.

STANDARDS AND SPECIFICATIONS

BRC Welded Wire Mesh is mainly produced in accordance to the following Standards, applicable to Cold Rolling and Mesh Welding:

COLD ROLLING	MESH WELDING
BS4482 : 2005 / BS 4449 : 2005	BS4483 : 2005 (mostly used in UAE)
ASTM A1064/A1064M - 16	ASTM A1064/A1064M - 16
DIN 488	DIN 488

The quality of Wire Rods used for Cold Rolling:

AISI / SAE 1010, 1012 and 1015

Beside these technical standards, BRC Operation and Products are carried under and in compliance the Quality Management Systems of ISO 9001:2015

COLD ROLLING CRITERIA

The Wire rods used to produce Cold Rolled Steel Wires are usually one or two millimeter bigger than Cold Rolled Wires. So:

WIRE DIAMETER USED	FOR COLD ROLLED WIRE DIAMETER
6mm	5mm
7/8mm	6mm
8/9mm	7mm
9/10mm	8mm
11/12mm	10mm
13.5/14mm	12mm

PACKING AND DELIVERY

BRC Welded Wire Mesh is packed in Bundles (with min 4 steel wires ties) of different sheets number, depending on type and diameters. Bundles weights are between 1.5 to 2.1 MT each. Each bundle carries at least two tags (from either side) for easy identification and tracing.

BRC Welded Wire Mesh is supplied, using flat bed truck or trailers.

TOLERANCES ON CUT LENGTH

If specified cut lengths are requested in the order, each wire shall be cut to within a tolerances of +25mm, -25mm on the specified length, where a minimum length is requested in the order, it shall be subject to a tolerance +50mm, 0-mm, where a maximum length is requested in the order it shall be subject to a tolerance of +0mm, -50mm.

TOLERANCE ON MASS

BS4483 : 2005 = \pm 6% for diameter <= 8mm & \pm 4.5 % for diameter > 8mm. BS4482 : 2005 = \pm 6% for diameter <= 8mm & \pm 4.5 % for diameter > 8mm. BS4449 : 2005 = \pm 6% for diameter <= 8mm & \pm 4.5 % for diameter > 8mm.

ASTM A1064/A1064M - 16 = \pm 6% for all diameter.

BRC had the opportunity to supply Reinforcing "Cut & Bent" Steel as well as BRC Welded Wire Mesh for many main projects across UAE.At all the times BRC was seeking customers' satisfaction and their success.

Listed be	elow some of our main projects:			
132	Islamic Center Theater	Gloce Constructors	4,600,000	Cut& Bent
133	Ettihad Rail	United Gulf Cont	4,000,000	Cut& Bent
134	Proposed G+5 CRC- Hostel BIDC	CRC	4,000,000	Cut& Bent
135	Directorate of Military Works	United Gulf Cont	8,000,000	Cut& Bent
136	Private School Campus	Al Arif Contracting	8,500,000	Cut& Bent
137	Stella Hotel	CRC	on-going	Cut& Bent
138	Rawdhat Building	Chapo Contracting	on-going	Cut& Bent
139	Resi. + Comm. BLDG. 2B+G+11 TYP	Al Arif Contracting	on-going	Cut& Bent
140	Bin Battuta Hotel	UNEC	on-going	Cut& Bent
141	Construction of Emarati Villa, Al Ain	Hi Tech Concrete Products LLC	on-going	Wire Mesh
142	Kaloti Refinery	UNEC	on-going	Cut& Bent
143	Al Rayyan Complex	Terna Contracting	on-going	Cut& Bent
144	Al Furjan Villas & Terrace Homes	UNEC	on-going	Cut& Bent
145	Rich Reit Tower	Kele Contracting	on-going	Cut& Bent
146	Azure Hotel	UNEC	on-going	Cut& Bent
147	Dar Al Quran	Fast	on-going	Cut& Bent
148	Takreer Ruwais refinery Carbon Black And Delayed Coker Project	Arabian Choice	on-going	Wire Mesh
149	Construction of Emarati Villa, Al Ain	Concrete Technology	on-going	Wire Mesh
150	Container Teminal, Fujairah	China Harbour Engg. Co. LLC	on-going	Wire Mesh
151	OICT Terminal C Phase 1, OMAN	China Harbour Engg. Co. LLC	on-going	Wire Mesh
152	935 Town Houses	GINCO General Contracting	on-going	Wire Mesh
153	MEYDAN HEIGHTS VILLAS	GINCO General Contracting	on-going	Wire Mesh
154	Reem raam Housing Community	Engineering Contracting Co.	on-going	Wire Mesh
155	Sadiayat Beach Villas Phase 2	Al Jaber Building LLC	on-going	Wire Mesh
156	ENEC Appartment Complex	Al Jaber Building LLC	on-going	Wire Mesh
157	Swiss Boarding School, Dubai	AL Ahmadiah Contracting	on-going	Wire Mesh
158	Sharjah Cement Co.	E. Construct	on-going	Wire Mesh & Cut& Bent
